

2016 APICS Certification Exam Pass Rate Report

I. 2016 Pass Rate Results

The following table of information details the final 2016 pass rate results by exam module and is broken down by North America, outside North America and global totals. For historical purposes, five years of previous data is included.

2012–2016 APICS Certified in Production and Inventory Management Exam Pass Data

KEY

NA = North America
 ONA = Outside North America

2016

Basics of Supply Chain Management			Master Planning of Resources			Detailed Scheduling and Planning			Execution and Control Operations			Strategic Management of Resources			APICS Certified Supply Chain Professional		
NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total
75%	80%	78%	66%	82%	72%	66%	73%	69%	69%	75%	71%	66%	72%	69%	66%	66%	66%

SCOR-Professional		
NA	ONA	Total
70%	60%	65%

2015

Basics of Supply Chain Management			Master Planning of Resources			Detailed Scheduling and Planning			Execution and Control Operations			Strategic Management of Resources			APICS Certified Supply Chain Professional		
NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total
75%	76%	76%	63%	73%	68%	64%	68%	66%	65%	72%	68%	66%	71%	68%	63%	59%	61%

2014

Basics of Supply Chain Management			Master Planning of Resources			Detailed Scheduling and Planning			Execution and Control Operations			Strategic Management of Resources			APICS Certified Supply Chain Professional		
NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total
75%	77%	76%	69%	77%	73%	68%	73%	70%	76%	77%	77%	65%	67%	66%	65%	58%	62%

2013

Basics of Supply Chain Management			Master Planning of Resources			Detailed Scheduling and Planning			Execution and Control Operations			Strategic Management of Resources			APICS Certified Supply Chain Professional		
NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total	NA	ONA	Total

II. Pass Rate Monitoring and Management

Exam pass rates are regularly monitored by the Certification Committee, Psychometricians and APICS staff throughout a given year during a variety of exam management events:

- Exam pass rate reports are reviewed quarterly by APICS staff and the Certification Exam Committees.
- Item pools are monitored on an ongoing basis throughout the year for question performance by PhD Psychometricians.
- Biannual test development activity includes a review of item pool performance on individual forms and corrective action may be taken to modify items that have performance anomalies.
- Question performance is reviewed annually during the Certification Exam Committee comprehensive item pool reviews, and corrective action may be taken to modify items that have performance anomalies.

III. Cut Score Process Overview

A Cut Score study distinguishes examinees that are minimally successful from those who do not have sufficient knowledge to pass the exam. Because the focus on the exam is on competence and not on advanced or expert skill levels and knowledge, the purpose of this activity is to determine the performance of the “borderline” test taker and where that border between pass and fail should be set. Every exam module includes a section within the Exam Content Manual defining the criteria for the successful candidate as guidance to the candidate on where that border is set.

A cut score event is necessary for establishing a baseline minimal passing raw score for an exam when one of the following conditions occurs:

- a. When there are significant changes to the exam content outline
- b. When there has been a significant shift in the exam’s body of knowledge resulting in more than 10% of new question content
- c. When a combination of statistical anomalies occur through periodic psychometric reviews
- d. When launching a new certification exam product

The cut score event is performed with a group of 12–15 individuals that demographically mirror the types of candidates who are likely to take the exam. To participate in the event, individuals must have the certification represented by the exam and be current in their certification. In addition, the group should be evenly balanced among the following demographics:

- a. Varied professional experience from less than 5 years to over 25 years
- b. Individuals with English as a second language for an international perspective
- c. Instructors
- d. A variety of industry vertical representation, such as manufacturing, healthcare, service
- e. Up to two Certification Exam Committee members
- f. PhD Psychometrician facilitator

Two best practice psychometric approaches are used to derive the raw passing score: the modified Angoff method and the Hofstee approach. The Angoff method specifically addresses the issue of borderline performance by requiring participants to retake the exam and estimate the performance of a minimally successful candidate on each question of the test form. The Hofstee approach requires participants to provide their input on a number of parameters for the exam, including the minimum and maximum acceptable percentage of passing candidates, and the minimum and maximum acceptable percentage of items that should be required to pass the exam. The results of both approaches are combined to provide a recommended score range from which the Certification Committee ratifies the final passing score.

IV. Scaled Score Explanation

Exam scores are based on the number of questions answered correctly, which corresponds to the raw score set in the cut score event. However, each module uses multiple exam forms that all have different levels of difficulty, as different questions are used. To provide a standard range for test takers and allow direct comparison of results from one administration to another, a scaled score approach is used to report final scores. The statistical process of converting the raw score into a scaled score table uses an equating technique to ensure an equivalent passing standard is maintained across all forms of the exam. For more information on this topic, please refer to our white paper, “[Understanding a Scaled Score.](#)”
