Introduction

Background - The BPM Customer Chain Reference Model was developed by the Business Process Management organization of Hewlett-Packard. This model has to date served as the starting point for process modeling efforts by providing BPM modelers a core set of high-level common business processes for the Customer Chain and a common language for the exchange of process knowledge in this business domain.

The Model's structure is inspired by that of the Supply Chain Operations Reference Model (SCOR).

June, 2004 - Reference Model Released to APICS Supply Chain Council

The Change Process

This paragraph describes the process for subject matter experts and consultants to provide inputs and review proposals for changes to the reference model.

Customer-Chain Operations Reference-model

| | |
|--------------------|--|
| Process Identifier | Customer Chain |
| Description | The Customer Chain domain is defined as the collection of business activities associated with all phases of converting customer (segments) into orders. The Customer Chain distinguishes 3 process types: Planning processes; Execution Processes; and Enabling processes. Planning processes balance aggregated demand across a consistent planning horizon. Planning processes generally occur at regular intervals and can contribute to Customer Chain response time. Execution processes are triggered by planned or actual events. Execution processes include customer visits, responding to customer inquiries, creation of customer solutions, processing of claims and support calls. Enable processes prepare, maintain, and manage information or relationships upon which planning and execution processes rely |
| Child Processes | |
| | <ul style="list-style-type: none"> ▪ P : Plan ▪ R : Relate ▪ S : Sell ▪ C : Contract ▪ A : Assist |

P: Plan

| | |
|--------------------|--|
| Process Identifier | P : Plan |
| Description | Planning processes prioritize sales activities and assign sales targets to Customer Chain resources. Planning processes generally occur at regular intervals |
| Child Processes | |

| | |
|--|--|
| <ul style="list-style-type: none"> ▪ EP : Enable Plan ▪ PA : Plan Assist ▪ PC : Plan Contract ▪ PP : Plan Customer Chain ▪ PR : Plan Relate ▪ PS : Plan Sell | |

| | |
|---|---|
| Process Identifier | EP.01 : Manage Plan Business Rules |
| Description | The process of establishing, maintaining, and enforcing decision support criteria for customer chain planning which translate to rules for conducting business, i.e. developing and maintaining customer standards of an entire customer chain such as service levels, given service requirements by customer chain stakeholders, partners and customers. Business rules align Plan process policies with business strategy, goals, and objectives. |

| | | |
|--------------------|---|--|
| Process Identifier | R1 : Relate to Intermediary | |
| Description | The process of converting markets/segments into customers by establishing and maintaining relationships with intermediaries (e.g. channel partners, resellers, retailers, etc). This includes gathering partner information, obtaining understanding of channels and partners needs and identifying product and/or service offerings for the channel partner. | |
| Child Processes | | |

- R1.01 : Identify Intermediaries
- R1.02 : Assign Account
- R1.03 : Define Engagement Model
- R1.04 : Obtain Customer Needs
- R1.05 : Establish Customer Profile
- R1.06 : Release to Sell

| | | |
|---|--|--|
| Process Identifier | R1.01 : Identify Intermediaries | |
| Description | The activities of receiving and logging a request to establish intermediary profiles. This process can be driven by Relate plans or external companies requesting a intermediary business relationship. Prospect intermediaries are identified and initially reviewed based on decision support criteria maintained in ER.01 : Manage Relate Business Rules. | |
| Key Inputs | | Key Outputs |
| <ul style="list-style-type: none"> ▪ Relate Plan | | <ul style="list-style-type: none"> ▪ R1.02 : Assign Account Manager |

| | | |
